Lynx Office

Bring AI to your documents, on your own terms.

Lynx Office

A native office suite with on-device AI

Create and edit Word, Excel, and PowerPoint files and sign PDFs locally, **without uploads or an account**. Connect your **AI agent through MCP**, or **automate document tasks with the CLI**.

Core Values

Lynx Office

The office suite for you and your AI agents

On-device

On-device AI, no uploads

Built-in AI **runs on your device**. **No cloud uploads or account required.**

Control

Your files. Your AI agent.

Choose where your files stay. With MCP configured, **connect an AI agent** like Claude or Codex.

Native

Native and faithful to your files

Create, edit, and save Word, Excel, and PowerPoint files in their original formats with a native desktop app.

Target Audience

Privacy-minded professionals

Professionals who **handle confidential files such as contracts, financial models, and scanned records**. They want to use AI in their daily work while keeping documents on their own device.

AI agent users

Professionals who already use **AI agents such as Claude or Codex** and want them to read, review, and edit Office files as part of their everyday work.

Work with More File Formats in One App

Lynx Office

Native Office editing

Create, edit, and save Word, Excel, and PowerPoint files in their original formats. Work with tracked changes, formulas, and editable slides.

A complete PDF toolkit

Annotate and sign PDFs, fill forms, and organize pages.

Markdown and images, too

Read formatted Markdown and work with common image formats, including PNG, JPG, and HEIC.

Keep Confidential Documents Under Your Control

LynxOffice

Keep files on your device

LynxOffice processes documents locally. The app does not upload your files to the cloud or require an account.

LOCAL DOCUMENT PROCESSING

Remove sensitive PDF text

Redaction removes the underlying text from a PDF so the selected content is no longer present in the redacted file.

Make confidential scans searchable

Run OCR on your device in Traditional Chinese or English and save a searchable copy while keeping the original scan intact.

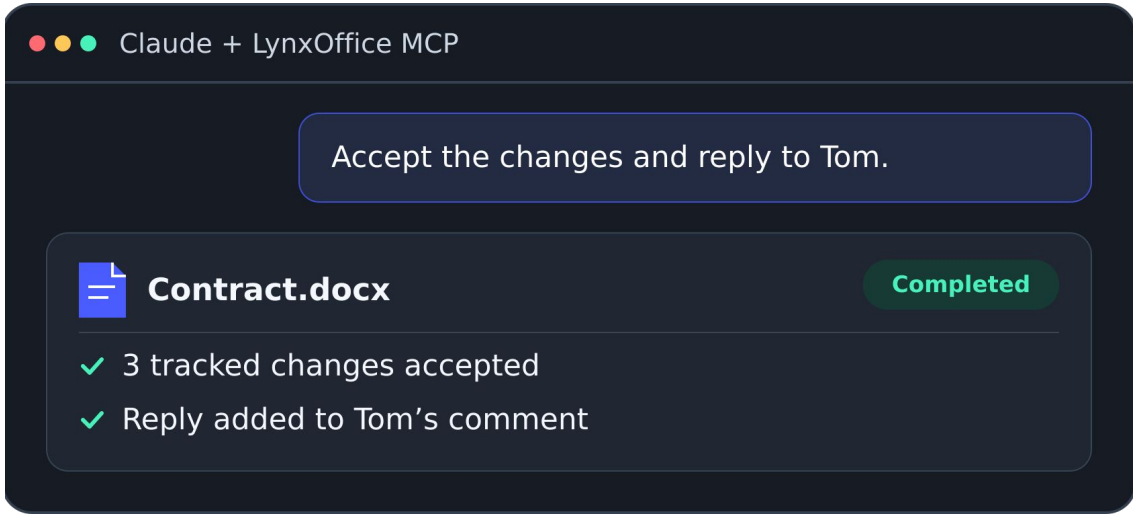

Work with AI and the Agents You Choose

Six tools on the Home screen

Review document structure and comments, test spreadsheet formulas, and make scanned PDFs searchable directly in LynxOffice.

Connect your own AI agent

With MCP configured, Claude, Codex, or another compatible agent can use local document tools to read and edit files you choose.

Automate tasks with the CLI

Where the CLI is available, use scripts to query workbooks, accept tracked changes, or merge and split PDFs.

Service Plans

Lynx Office

LynxOffice

- Free during early release
- No subscription or account required
- Free CLI and MCP Server

ComOffice

Add Office editing to your apps and systems with the SDK.
